Operation Name: _____ **Date:** _____

Producers may manage nutrition and fertility by applying allowed materials on the National List. Check the National List or OMRI Generic Materials List for allowed synthetic substances and restrictions on certain natural substances. Synthetic materials not shown on the National List, ash from manure burning, and sewage sludge are prohibited.

A. INPUTS

☐ Not Applicable, no inputs of any kind used

Materials used must be reviewed and approved by CCOF prior to use. To gain approval, materials must appear in the current Organic Materials Review Institute (OMRI), www.omri.org or the Washington State Department of Agriculture material lists or be submitted for CCOF approval by using the CCOF Material Review Request Form (MRRF) available at www.ccof.org/forms.php.

For any material that does not appear on the WSDA or OMRI lists, you must have an approved MRRF on file from CCOF. This protects you and helps ensure you do not use materials that will negatively affect your organic certification. More information about input materials is available at: www.ccof.org/pdf/materialsannouncement.pdf.

List ALL materials, including fertility and pest management materials used.
