

# Organic Seed Source List

Certified organic growers are required to utilize organic seed unless organic versions are commercially unavailable.

Commercial availability means the ability to obtain seeds in an appropriate form, quality, or quantity to fulfill an essential function in a system of organic production, and is determined by CCOF in the course of reviewing the organic system plan.

If organic seeds are not commercially available, non-organic seeds are allowed only if they are non-GMO and untreated or non-GMO and treated ONLY with substances listed as allowed on the National List.

Note that CCOF certified operations are required to demonstrate good faith attempts to source organic versions prior to utilizing non-organic seed. This documentation may be in the form of a log showing calls made, product/supplier catalogues, letters received, or other demonstrations of good faith efforts on your part.
