yo328	Viriditas Farm - Vreseis Limited dba Sally V. Fox	Brooks	California	95606	530-796-3388					To breed cotton that grows in color organically, one needs to be able to grow up generation after generation of offspring of the seeds made from cross pollinating individual plants (classical plant breeding) - organically. Back in the early 1980's there were no organic cotton farmers that I could find, so I began leasing land and farming my cotton breeding plots (called breeding nurseries) myself. After great work and much luck, in 1990 I was able to certify my first farm with CCOF. The commercial cotton growers did not take kindly to my work and so I had to move a few times. From Kern County to Western Arizona and then finally to the beautiful Capay Valley over the course of a decade. Each farm I transitioned from conventional to Certified Organic. So, here on Viriditas Farm, my CCOF certified organic farm certified since 1998, I grow heirloom wheat, cotton breeding plots, black eyed peas, sheep for wool and a bit of meat, and various small grains.
