

# Biodiversity & Natural Resource Cost-Based Monitoring Log

Organic production must, by definition, be managed to respond to site-specific conditions by integrating cultural, biological and mechanical practices that foster cycling of resources, promote ecological balance and conserve natural resources. Certified organic operations must select, carry out and record production practices that “maintain or improve the natural resources of the operation,” (NOP§205.200). This form can be used to track costs associated with pest and fertility management on a daily, weekly, monthly or annual basis in order to monitor the effectiveness of the Biodiversity Conservation & Natural Resource Management plan outlined in OSP form G4.2.

**Operation Name:** \_\_\_\_\_ **Client ID:** \_\_\_\_\_

Date	Method of Pest / Fertility Management	Cost	Total Cost to Date	Notes
